

Amend 6 claim to read:

6. (Amended) A corner cutter comprising:

a cutter body including upper and lower handles having a pivot securing said handles together, said lower handle having an upper blade end extending beyond said pivot and having an arcuate first blade edge secured thereto,

31 said upper handle having a lower blade end extending beyond said pivot and opposing said upper blade end, said lower blade end having an arcuate second blade edge secured thereto,

said handles and blade ends being pivotable about said pivot to provide opposing movement of said first and second blade edges between an open and closed position,

said first and second blade edges being disposed in mutually opposing positions and the space between said first and second blade edges varies along the length of the edges when said first and second cutting edges are in the closed position for cutting sheets of brittle material positioned between said blade edges.

(Amend claim 7 to read:)

7. (Amended). The device of claim 6 wherein said first and said second blade edges each have outer portions and an inner portion and the distance between the opposing outer portions of said first and second blade edges is less than the distance between said inner portions of said first and second blade edges.

(Amend claim 8 to read:)

8. (Amended). The device of claim 6 wherein the outer portions of said opposing blade ends are curved for cutting curves into said sheets of brittle material between said edges.

(Amend claim 9 to read:)

9. (Amended). The device of claim 6 including a return spring connected between said upper and lower handles.

31 (Amend claim 10 to read:)

10. (Amended). The device of claim 9 including stop means connected between opposite ends of said upper and lower handles for maintaining said handles in a normally open position.

(Amend claim 11 to read:)

11. (Amended). The device of claim 6 wherein the opposing blade edges are disposed to be perpendicular to the surfaces of sheets of brittle material there between.

(Amend claim 12 to read:)

12. (Amended). The device of claim 11 wherein one of the opposing blade edges has an angled inner surface providing a sharp edge for cutting said brittle material.

(Amend claim 13 to read:)

13. (Amended). The device of claim 11 including a guide secured to said lower blade end for positioning said lower blade end on a sheet of brittle material for simplifying the cutting of said sheet.
